CLICKEYbits – A New Class of Fidget Toy on Kickstarter

By Shep Poor
May 5, 2017

Jenkintown, PA – The newest wave in the fidget toy arena has launched on Kickstarter. CLICKEYbits fuses the satisfying click of mechanical keyboard buttons into a six-sided fidgeters dream that can be tapped, squeezed and rolled for continuous sensory feedback. Originally conceived as a specialty item for keyboard enthusiasts, it swiftly evolved to a polyhedron design that offers superior fidgeting satisfaction compared to cubes and spinners.

CLICKEYbits are offered in three different versions: the Classic, with three matched pairs of mechanical keys; the Tester, with six different kinds of keys; and the Kickstarter Edition, with CLICKEY keys on all six sides.

The Kickstarter campaign will run through May 25, 2017.
